

TYPO3.Flow - Bug #30312

Entity class name is not properly detected in Repository::__construct()

Description

If a package key contains the string "Repository", model class names are not correctly resolved in the Repository constructor because the line:

```
$this->entityClassName = str_replace(array('\Repository\'', 'Repository'), array('\Model\'', ''), get_class($this));
```

fails to detect the correct position of the substring and should be replaced by something like:

```
$this->entityClassName = preg_replace(array('/\Repository\/', '/Repository$/'), array('\Model\'', ''), get_class($this));
```

[BUGFIX] Enhance entity classname detection in repository constructor

Fix bug where all occurrences of the word "Repository" were stripped out during the automatic retrieval of the entity classname. This changes the behavior in the way, that only removes the last occurrence.
