

TYPO3.Flow - Bug #30714

\TYPO3\FLOW3\var_dump() memory use causes fatal error debugging objects.

2011-10-10 12:04 - Alexander Schnitzler

Description

During some FLOW3 CRUD testing, I got an error several times I wanted to debug objects that have related objects.

Something like `\TYPO3\FLOW3\var_dump(new SomeObject())` always worked, more complex object trees caused PHP run out of memory.

In my example (see attached picture) I just created a "new"-form to create a new Message-Object that has a User-Object related as the sender of the message. Yet the debugging of that simple thing failed.
