Description

If only a single table is shown in list module and you click on the export icon in the docheader you get the following fatal error:

#1: PHP Catchable Fatal Error: Argument 2 passed to t3lib_iconWorks::getSpriteIconForRecord() must be an array, null given, called in X:\t3web\t3core\typo3_src-4.6.0\typo3\sysext\impexp\app\index.php on line 823 and defined in E:\t3web\t3core\typo3_src-4.6.0\t3lib\class.t3lib_iconworks.php line 722.

Revision ad18a753 - 2011-11-18 21:02 - Francois Suter

[BUGFIX] Fatal error when exporting from root

An uncaught exception happens when trying to export records from a single table view in List mode on the page tree root. This is due to the tree root being handled as a normal page record.

With this patch the tree root is handled as it should. Some cleanup (CGL) is also applied.

- Status changed from New to Needs Feedback

Hi Uschi,

I couldn't reproduce the issue on a local test install. Maybe this is due to an extension. What type of record were you trying to export?

#2 - 2011-10-31 16:48 - Markus Klein

```
822: $rec = t3lib_BEfunc::getRecordWSOL('pages', $rParts[1]);
823: $tblList .= 'Table "' . $tName . '" from ' . t3lib_iconworks::getSpriteIconForRecord('pages', $rec) .
```

So getRecordWSOL() returns NULL.

Comment of getRecordWSOL() says: @return array Returns the row if found, otherwise nothing.

I wonder why it returns nothing. Is it a non-existing page??

#3 - 2011-11-01 15:55 - Francois Suter

This might well be. So I would say the fix is simply to wrap a test around \$tblList so that it skips the record if nothing was returned by t3lib_BEfunc::getRecordWSOL(). I would go with:

```
if (isset($row) && is_array($row))
```

#4 - 2011-11-02 12:29 - Uschi Renziehausen

Hi Francois :-)

I tried to export be users located in the rootpage (id=0). This does neither work in the introduction package nor in my installation. Exporting data from other pages works fine.

Kind regards, Uschi

- Assignee set to Francois Suter

- Target version set to 4.5.8

- TYPO3 Version changed from 4.6 to 4.5

Hi Uschi,

Thanks for the details, I could reproduce the issue. Actually it happens since the new skinning API was introduced, i.e. since TYPO3 4.4, but I guess we'll correct it only for 4.5 upwards.

Actually Markus' remark is still relevant as it could lead to the same error and the proposed fix should also apply to your problem. I should be able to come up with a patch quickly.

#6 - 2011-11-04 16:19 - Francois Suter

OK, it's a bit more complicated than I thought and actually different from Markus' scenario, because the root page requires special handling.

The export process is not the same when you start from the page tree or from the list view. Just excluding the page does not produce a good result, since the T3D file cannot be imported anymore.

More later. Have to go now.
