TYPO3 Core - Bug #31996

Workspace preview does not transfer query parameters

2011-11-22 16:21 - Francois Suter

Description

If the URL called up when previewing from the TYPO3 backend contains additional query parameters, these should be passed on to the URLs of the iframe panels of the preview view.

I have no scenario from the Core to repeat this, but I was in a situation where I manually added query parameters to the URL and was surprised to find them being ignored. This is why I'm not submitting this patch outright, but rather just uploading it here for discussion.

Incidentally this patch resolves a "todo" that was mentioned inside the PreviewController about the language parameter not always being "L". With this patch all non-workspaces related GET query parameters are retrieved, so there's no worrying about which should be the language parameter.

[FEATURE] Transfer query parameters in preview

The workspace preview does not transfer query parameters to the iframes used for preview. This prevents extensions passing custom parameters from functioning properly.

- Status changed from New to Accepted

Patch looks fine for me - would you mind sending it to Gerrit?

#2 - 2012-02-17 16:16 - Michael Voehringer

+1 for this Patch.

#3 - 2012-07-17 15:46 - Ernesto Baschny

- Target version deleted (4.5.9)

Not really targetted to any release yet, keep up the discussion. :)

#4 - 2012-10-09 17:49 - Francois Suter

I'll get back to that one, I found a scenario where it happens. The target version can be reset to the next TYPO3 4.5 release, please.

- Status changed from Accepted to Under Review

Patch set 1 for branch **master** has been pushed to the review server.
It is available at http://review.typo3.org/15680

#6 - 2012-10-16 10:02 - Francois Suter

How to test simply:

1. preview any page from a workspace
2. go to your browser's address bar and add "&foo=bar" to the URL
3. check the frames info: the "&foo=bar" parameter does not appear
4. apply the patch and repeat the process, "&foo=bar" should be visible in both (live and workspace) frames URLs

For the record, my real-world use case is with Tesseract's displaycontroller preview function, where some parameters are passed in particular to trigger a preview of hidden elements. Since I doubt anyone has such a setup available, the above test case does fine instead.

#7 - 2012-10-16 10:35 - Francois Suter

I just realized that looking at the frame info is misleading. A better way to test is to really print out the GET var "foo" in the page and observe its absence/presence.
