

TYPO3 Core - Bug #32253

Shortcut redirect doesn't respects the linkVars syntax

Description

Currently the code that creates the redirect url for a shortcut page only respects the linkVars option as list of parameters without additional validation informations like it's documented in the TSRef¹. Unfortunately such paramaters are completely dropped and this leads to major problems on multilanguage sites with the new shortcut redirect feature.

[1] http://typo3.org/documentation/document-library/references/doc_core_tsref/4.1.0/view/7/3/

The file class.tslib_pagegen.php contains a valid implementation for this issue and should just moved to a nice API method as it does the same thing like the shortcut redirect functionality.

Hello

I have big trouble with this.

Before Update to 4.6.4 all worked fine, but now additional parameters are stripped from the URL and so authentication failes, trying to access a page.

the url:

<http://www.DOMAIN.de/index.php?type=8800881&username=USERNAME&password=PASSWORD>

the redirect goes to:

<http://www.DOMAIN.de/homepage/?type=8800881>

after applying the patched 31333 class.tslib_fe.php the pagetype is kept by the redirect, but username and password are dropped. So I applied this patch. But problem is still there.

I use realURL - maybe there is anything more to do?

#9 - 2012-02-20 23:29 - Stefan Galinski

Did you tried to add this variables into the linkVars option? Preferably only on the shortcut page?

```
config.linkVars := addToList(username,password)
```

#10 - 2012-02-21 08:12 - Johannes C. Schulz

That helped - thank you!
