

TYPO3 Core - Bug #32406

Menus not working in translated pages for type "shortcut"

Description

After upgrade to version 4.6 in an old typo3 install we have been having problems with a translated site. The problem is some menus were not generated. After a deep search we found that it was only in the shortcut pages. We have seen the problem comes from the pageOverlayFields variable that comes by default in newer versions. Some of the fields that weren't before are shortcut and shortcut_mode, and these seems to be the problem. We have deleted these fields in the install tool \$TYPO3_CONF_VARS['FE']['pageOverlayFields'] and now it seems to be working perfectly.

The question is, why those fields are in the config_default file now and not where in the old versions, and are they really needed?

Those fields were added in February 2009 for TYPO3 4.3.

The reasons are available here: <http://forge.typo3.org/issues/16935>

Maybe the change for 4.6 how shortcuts are treated causes this behavior.

Maybe the change for 4.6 how shortcuts are treated causes this behavior.

Ok, I understand. I've come back to see what was happening to the alternative page language. What I've seen is that when you come from an update from an old typo3 and the page is a shortcut, in the alternative page language the page type is still standard page.

Maybe the upgrade wizard must solve this incongruence or in any case advert for this.

- Category set to Frontend

- Status changed from New to Accepted

- Complexity set to medium

As mentioned already in the (now closed duplicate) [#33333](#):

How to reproduce in the intro-package:

- Unter "Examples > Language" create 2 pages "Page 1" and "Page 2"
- Make "Page 1" a shortcut to "Page 2"
- Create translation pages for both pages (Dansk)
- Go to the frontend to the "Examples > Any language" Page
- See both sub-pages are correctly linked
- Switch to "Dansk": First page is not linked correctly anymore (starting with TYPO3 4.6)

Strange enough, this is not a problem in current master (future 4.7) anymore, so somehow it got fixed, but I could not localize the fix yet. So it is a 4.6 only problem currently.

- *Subject changed from Menus not working in translated pages to Menus not working in translated pages for type "shortcut"*

#6 - 2012-07-13 10:52 - Kai

Same after Update from 4.5 to 4.7.2

All translation pages type shortcut are not working anymore. They are all back to page type standard.

#7 - 2012-08-06 08:28 - Max Roesch

Same after Update from 4.5 to 4.7.2

New translations of shortcuts only work if the target is set manually. No fallback to origin target, even though it's shown in the backend. Frontend just renders empty a-Tag with translated shortcut title

#8 - 2012-08-06 10:07 - Markus Klein

Sorry for the negative vote. That happened by accident. Unfortunately I'm not able to remove my vote again.

#9 - 2013-04-29 14:11 - Joachim King

I seem to have the same bug in a 6.0.4 project (new site, no update). Can someone confirm the bug in 6.0?

Shortcut pages don't get linked in menu. The solution was to remove "shortcut" and "shortcut_mode" from `$TYPO3_CONF_VARS['FE']['pageOverlayFields']`. Thanks @ Goncal!

#10 - 2014-06-27 09:34 - Roman Eberle

bug confirmed for 6.1.8

...well - bug or feature? lol

I consider it a bug:

translation of shortcut should be created as shortcut with same shortcut-mode/-target (by default)

not a bug:

you may still switch settings in translated record (in other words: keep "shortcut" and "shortcut_mode" in `$TYPO3_CONF_VARS['FE']['pageOverlayFields']`)

(hi JKI :-))

- *Status changed from Accepted to Needs Feedback*

- *Is Regression set to No*

Can't reproduce this on current master (Version 7).

pageOverlayFields contains shortcut and shortcut_mode.
