Description

Since the configuration of FLOW3 is complex and comes from many different files it should be possible to show the currently active framework-configuration for better understanding and debugging.

I suggest to implement a "configuration" cli-command for that purpose. At first the command-controller will only have a showCommand method but later on it can be extended to evaluate and to write the configuration.

Revision ac7f4bd9 - 2011-12-23 18:14 - Martin Ficzel

[FEATURE] (CLI): Add configuration:show command for debugging

Adds the cli command "configuration:show" with the options --type and --path.

The patch adds the method getAvailableConfigurationTypes to the configurationManager which is used by the cli-command.
