Description

After clean installation of Introduction Package 4.7.0 alpha 2 through the 1-2-3-4 tool the whole site is working but when I'm trying to search for anything in the search box it throws an error (the bottom part of text). The 4.6.3 Introduction Package searchbox works without problem. I'm using WAMP installation from wampserver.com. For both x32 and x64 installations of local web server if gives the same result - the search is working in the 4.6.3 introduction package and gives an error in 4.7.0 alpha2.

I've submitted this situation to the typo3-team-bugs mail list. It was confirmed and it was recommended to open a new bug issue.

The error message is:

@

#1283790586: There is no entry in the \$TCA array for the table "index_config". This means that the function enableFields() is called with an invalid table name as argument. (More information)

History

#1 - 2011-12-23 16:03 - Steffen Gebert

- Category set to Indexed Search
- Status changed from New to Accepted
- Priority changed from Should have to Must have
- Target version set to 4.7.0

Can reproduce this. I don't know, if its Intro-Package config or indexed_search itself.

#2 - 2012-03-05 17:59 - Steffen Ritter

- Target version changed from 4.7.0 to 4.7.0-beta3

#3 - 2012-04-25 11:05 - Chris Müller

I can confirm this with 4.7.0 final release. It's a pity, that indexed search now isn't usable.

#4 - 2012-04-30 11:54 - Björn Pedersen

Looking at the code, it seems like the TCA is only added correctly, if crawler is loaded before index_search (see ext_tables.php, ext_localconf.php).
