In Model:

```
/**
 * The value
 * @var float
 * @FLOW3\validate(type="Number")
 */
protected $value;

/**
 * @param float $value
 * @return void
 */
public function setValue($value) {
    $this->value = floatval($value);
}
```

When trying to persistent a Model with this Validation, i throws this Exception as shown.

I Think it may have something to do with the localization.

When changing it to float validation, it works fine.
