This change would affect **all** users and require adjustment of **all** standard controllers. The advantage is unclear, thus the cost-benefit ratio seems way off...

Historic background: Once upon a time FLOW3 used controller classnames without the Controller suffix. Now go and try to implement this: class Default implements ControllerInterface {} That is why we have StandardController...

Linguistic nitpicking: "default" exists only as a verb, "to default to something" - but that's only a funny side note :)
