Description

Hi,

this is just a very little issue, but your flow3.bat gives some wrong feedback.

If i callflow3.bat I currently get this feedback:

FLOW3 1.0.2 ("Development" context)
usage: **./flow3** <command identifier>

See '*./flow3* help' for a list of all available commands.

This is quite wrong.

The correct response should be:
FLOW3 1.0.2 ("Development" context)
usage: **flow3.bat** <command identifier>

See '*flow3.bat* help' for a list of all available commands.

as *.bat files are executed by default, you can leave out the extension. So "flow3" <ENTER> works fine.
But you're right, the "./" should be trimmed off on Windows.

No sorry, your wrong.
You need to specify the .bat!
Windows couldn't handle the request of flow3 help
This has two reasons.
1. you have two files in the same folder. flow3.bat and flow3. So Windows would send the Request to the flow3 File not to the bat itself.
2. Windows Powershell throws a errormessage (in german):
PS C:\inetpub\vhosts\domain.com\httpdocs\Quickstart> flow3
Die Benennung "flow3" wurde nicht als Name eines Cmdlet, einer Funktion, einer Skriptdatei oder eines ausführbaren Prog
ramms erkannt. Überprüfen Sie die Schreibweise des Namens, oder ob der Pfad korrekt ist (sofern enthalten), und wiederh
olen Sie den Vorgang.
Bei Zeile:1 Zeichen:6
+ flow3 <<<<
+ CategoryInfo   : ObjectNotFound: (flow3:String) [], CommandNotFoundException
+ FullyQualifiedErrorId : CommandNotFoundException

> You need to specify the .bat!

leaving it out works for me in the default CMD and msysgit interface on Windows 7 and XP.
But, as we have to "localize" this anyways, it doesn't really matter.

Maybe work on Windows 7 and XP, but not on Windows SERVER 2008 with Powershell. ;-)
But your right. It doesn't matter.
