Target version:		Complexity:	easy
PHP Version:			
Has patch:	No		

Description

Though YAML seems to be much simpler than XML, but companies whose staff is trained to use XML instead of YAML. It would be a nice idea to have Configuration parser which could either use XML or YAML based on developer choice.

History

#1 - 2012-03-07 16:06 - Karsten Dambekalns

- Category set to Configuration
- Status changed from New to Rejected
- Assignee set to Karsten Dambekalns
- PHP Version deleted (5.3)
- Complexity set to easy

Our approach to keeping things simple means: one configuration format is enough. Especially if not knowing YAML is the only reason to ask for this feature. In this case the added complexity doesn't seem to be worth it.

But: feel free to come up with an XmlSource class implementing \TYPO3\FLOW3\Configuration\Source\SourceInterface - if you really need it.
