**Description**

The page language information is already written in the `<html>` element of a page, thanks to the TS parameter "htmlTag_langKey". It would be even better if this language information could be send in the http headers of the page. It could help, for instance, for tools used for automatic translation of pages or for voice synthesis.

**Revision 7df80762 - 2015-06-16 18:02 - Romain Leleu**

[FEATURE] "Content-Language" HTTP header now added when rendering

Previously page language information was only sent as meta tag.

By default new and existing installations will send a header "Content-language: XX" where "XX" is the iso code of the sys_language_content if that is properly defined by the sys_language record representing the sys_language_uid.

A new TypoScript configuration "config.disableLanguageHeader" allows to disable this behavior. You must set "config.disableLanguageHeader" to get the previous behavior (no header).
