**Description**

there can be various causes when the rootline is broken. one which I get quite often when starting a new project is because I have something like

```php
$TYPO3_CONF_VARS['FE']['addRootLineFields'].= ',tx_realurl_pathsegment';
```

but realurl is not installed or the field is not available.

therefore the query fails.

changing the error msg helps to provide some additional information. as the query is really simple (select $fields from pages where uid=$uid) having those 2 arguments it helps a lot to solve the puzzle (patch will be pushed later, diff is just to not loose it.)

**How to test:** just add

```php
$TYPO3_CONF_VARS['FE']['addRootLineFields'].= ',xyz';
```

to your localconf and get the error.

Revision b9f12f8f - 2012-02-09 13:12 - Georg Ringer

[TASK] Improve error message of "broken rootline"

Currently it is hard to get the reason why the error "broken rootline" appears. Therefore the error msg can be improved by adding the ID and fields which are queried.
