Target version:	1.0.5			
PHP Version:			**Complexity:**	
Has patch:	No			

Description

If you create a CommandController which is not in the /Controller/ directory of a package you will get an error saying "Invalid controller class name [...] 1305100019"

I understand how this is correct, but still this message is confusing. A check for the right directory and a suitable error message might be the best solution. But a simple hint to check for the directory might solve this easily.

The error is thrown in
FLOW3/Packages/TYPO3.FLOW3 / Classes / MVC / CLI / Command.php Line 60

[BUGFIX] Fix error message about command controller classes

If you create a CommandController which is not in the "Controller" directory
of a package or where the name does not end in "CommandController" you will
get an error saying "Invalid controller class name [...] 1305100019".

This change makes the error message a little more helpful.
