

TYPO3.Flow - Feature #33469

Task # 36800 (Accepted): Streamline Resource object API

Support for temporary Resources

2012-01-26 17:05 - Bastian Waidelich

Status:	Rejected	Start date:	2012-01-26
Priority:	Should have	Due date:	
Assignee:		% Done:	0%
Category:	Resource	Estimated time:	0.00 hour
Target version:		Complexity:	
PHP Version:			
Has patch:	No		

Description

Currently all resources need a Database, because the resource manager uses it in order to store resource pointers. It should be possible to work with resources without having to use the (doctrine) persistence layer.

History

#1 - 2012-05-03 10:51 - Robert Lemke

- Parent task set to #36800

#2 - 2013-08-02 17:03 - Robert Lemke

- Status changed from New to Rejected

With what we currently call "Resource" - that is, managed assets which are stored somewhere and published somewhere (else) - I don't see a way to work without a database or at least a file based database like sqlite.
