#### Description

Theoretically it is possible to use another type of entry point than the pre-configured WebRedirect. In practice, however, it is not possible to override the pre-defined type due to a bug in the corresponding parsing function in AuthenticationProviderManager.

While being on it, the setting names and structure could need some improvement to assert that only one entry point can be defined at all. The result should look like this:

```
providers:
  DefaultProvider:
    provider: 'PersistedUsernamePasswordProvider'
    token: 'TYPO3\FLOW3\Security\Authentication\Token\UsernamePasswordHttpBasic'
    entryPoint: 'HttpBasic'
    entryPointOptions:
      realm: 'Blog'
```

##### Revision ad0bcd5e - 2012-04-11 14:10 - Karsten Dambekalns

[!!!][BUGFIX] Alternative entry points can be configured again

This fix allows for using other than the pre-defined WebRedirect entry points (for example the HTTP Basic entry point).

In order to avoid confusion, this patch also streamlines the setting names for authentication providers. It makes sure that only one entry point can be defined at all and adjusts the naming of other settings to be in line with other FLOW3 setting conventions.

The keys of settings for the authentication provider have changed as follows:

```
DefaultProvider:
provider: '(a class name)'
providerOptions: [ ... options ... ]
token: '(a class name)'
entryPoint: '(a class name)'
entryPointOptions: [ ... options ... ]
```
