<b>Description</b>			
Reproduce:			
<ul style="list-style-type: none"><li>• Use filter to find some pages</li><li>• Click on a page to select it</li><li>• Close filter</li></ul>			
In the right frame that page is still open. However the pagetree knows nothing about a selected index.			
This behaviour is annoying for example in case you found a page and now need to close the filter to look after other pages on the same level. That would mean searching in the tree for the correct path, expand it.

to which branches has this been applied? Has it been applied down to 4.5?

### #9 - 2012-04-13 10:26 - Stefan Galinski

Currently it's merged for master and pushed to Gerrit for 4.7, but Steffen must decide if it should be integrated for the final release (or the next RC).  
The patch needs changes for 4.6 and 4.5 if the virtual tree root feature from 4.7 isn't backported. Same for the rootline shortening patch from Joey for 4.5, but this is already in Gerrit. Reviews are welcome!

please mark as "resolved". patch for 4.5/4.6 abandoned, all others merged.

patch can't really be backported. needs total rework for 4.5/4.6. no time for that.
