

TYPO3.Flow - Feature #33862

a shorthand for custom validators

2012-02-12 00:44 - Stefan Neufeind

Status:	Resolved	Start date:	2012-02-12
Priority:	Should have	Due date:	
Assignee:	Stefan Neufeind	% Done:	100%
Category:	Validation	Estimated time:	0.00 hour
Target version:	1.1	Complexity:	
PHP Version:			
Has patch:	No		
Description			
Instead of using the fully qualified classname (which is long) Extbase has a shorthand of the form <ExtName>:<ValName>. This will resolve to Tx_<ExtName>_Validation_Validator_<ValName>Validator there.			
For FLOW3 instead of <ExtName> the <PackageName> could be used to create a class name.			
(Thanks go to Martin Kutschker for that suggestion.)

[FEATURE] Shorthand syntax for custom validators

This change allows the Validate annotation for properties to be given a value like "Mypkg:My". This is equivalent to using "Mypkg\Validation\Validator\MyValidator" - just shorter.

Thanks to Martin Kutschker for reporting and inspiring patch.

Releases: 1.1

Revision fdfca9eb - 2012-06-18 16:32 - Sebastian Kurfuerst

[BUGFIX] Correctly implement validator resolver short notation

Currently, the short notation for validators which has been introduced with Id807dbfa78ae1388aa8cd53bfc578893eade427c does only support syntax like TYPO3\FLOW3:EmailAddress; but we should rather support TYPO3.FLOW3:EmailAddress as this is how we use package keys at all other places which are not PHP code.
