Target version:	1.1	Complexity:	
PHP Version:			
Has patch:	No		

Description

To use a Resource with file operations, one can use the resource://... scheme and the __toString() method of any ResourcePointer.

To make this a little easier, casting of Resource to string should return the SHA1 (as is the case with the ResourcePointer already). A getUri() method to return a ready to use resource://... string would also be useful.

Revision 8cdaae41 - 2012-05-08 18:16 - Karsten Dambekalns

[FEATURE] Add __toString() and make Resource use more convenient

To use a Resource with file operations, one can use the resource:// scheme and the __toString() method of any ResourcePointer.

To make this a little easier, this change adds two new methods to the Resource class:

__toString() returns the SHA1 of the ResourcePointer the Resource is holding (as is documented for ages).

getUri() returns a ready-to-use resource://<sha1> URI of the ResourcePointer the Resource is holding.
