Description Hi everybody, as I wrote a plugin that relies on the XML/JSON caretaker ist offering i stumbled upon one glitch: I add "addResult=1" to the querystring, expecting to get the result of that specific test, but the only field that gets populated it the timestamp. See pasted output below: <xml> <success>true</success> <id>instance_4_test_1</id> <node> <id>instance_4_test_1</id> <title>Ping</title> <type>Test</type> <description></description> </node> <result> <state/> <info></info> <message></message> <timestamp>1330007112</timestamp> </result> </xml>	

History

Ah, just forget it. Just looked at the JSON output and discovered that the state for an "ok" Test is 0 and thus the XML part of state is empty.
