<b>Description</b>			
The checked state of a radio button is not properly checked in the case of a validation error, this should be checked by comparing the value to the lastSubmittedFormData

Can you provide more details please (code snippet, version(s) used, ..). This should work.  
Is this maybe related to [#33628](#) ?

Thanks

Perhaps it's the bug described in my blog post? <http://blog.layne-obsordia.de/post/fix-radio-and-checkbox-for-fluid#comment-795695300>  
There is a bug fix in the post.

Or is this another issue? I noticed that submitted checkboxes and radio buttons aren't selected anymore.

So e.g. the checkbox is not selected initial.

I check it, submit the form and the form will be displayed again, on validation error, then the checkbox is no more checked.

I just fixed it for the rewritten property mapper and got the submitted value and did a compare.

This bug only happens for radio buttons with name="something" and not for radio buttons specified with property="something".

Looking at the code it seems almost like a intentional behaviour:

```
if ($checked === NULL && $this->isObjectAccessorMode()) {
    if ($this->hasMappingErrorOccured()) {
        $propertyValue = $this->getLastSubmittedFormData();
    } else {
        $propertyValue = $this->getPropertyValue();
    }

    // no type-safe comparison by intention
    $checked = $propertyValue == $valueAttribute;
}
```

`$this->isObjectAccessorMode()` is the problem...
