Description

It would be useful to have some more examples how to nest different variables, array and ViewHelpers; for example, how could

```
...arguments="{foo: bar, sample: baz -> f:nother.vh(more: stuff)}"
```

be achieved; or may that even be correct?

[TASK] Show up hints for nesting inline ViewHelpers

This adds a section with some examples about how to nest
and use inline ViewHelpers.
Besides, it does some minor typo and formatting corrections.

+1

FYI: Your example should be

```
<f:someViewHelper arguments="{foo: bar, sample: '{baz -> f:nother.vh(more: stuff)}'}" />
```

See more examples here:

that's fine, thanks Bastian; I think the examples from the FAQ could almost be transferred 1:1.
I'll take care, fine?
