

## TYPO3.Flow - Bug #3488

### Parameters of actions which have a name containing uppercase characters are not automatically registered

2009-05-27 14:25 - Robert Lemke

<b>Has patch:</b>			

#### Description

Automatic parameter registration works for the regular CRUD actions:

```
public function createAction($myParameter)
```

but doesn't work if there's an uppercase character in the action name:

```
public function createFooAction($myParameter)
public function createMyBarAction($myParameter)
```

This is due to case conversion problems in the Action Controller and finally fails in this line:

```
protected function initializeActionMethodArguments() {
    $methodParameters = $this->reflectionService->getMethodParameters(get_class($this), $this->actionMethodName);
```

because `$this->actionName` contains for example "createmybarAction"
