Target version:				
PHP Version:	5.3		**Complexity:**	medium
Has patch:	No			

Description

The current implementation of TYPO3\FLOW3\I18n\FormatResolver::getFormatter() only tries to get formatters from the TYPO3\FLOW3\I18n\Formatter namespace.
It should, however, be somehow possible to use your own formatters in your own namespace.

I have two suggestions for this:

1. Use annotations to collect all possible formatter names
2. Add a setting in Settings.yaml with a list of registered Formatter-Namespaces

History

#1 - 2012-03-30 12:13 - Julian Wachholz

Also possible to use ReflectionService::getAllImplementationClassNamesForInterface

#2 - 2013-07-01 16:07 - Adrian Föder

- Status changed from New to Resolved
