

TYPO3.Flow - Bug #36804

Orphaned entities within aggregates are not removed

2012-05-03 11:04 - Robert Lemke

Status: New	Start date: 2012-05-03
Priority: Should have	Due date:
Assignee:	% Done: 0%
Category: Persistence	Estimated time: 0.00 hour
Target version:	Complexity: hard
PHP Version:	
Has patch: No	
Description Consider this example: An entity Image has a many-to-one or one-to-one relation to an entity Resource. Image is an aggregate root and is stored in an ImageRepository. Resource does not have its own repository and thus is a practically member of the Image aggregate. Now, if an Image object is removed, its Resource object remains in the database and can't accessed through any object or repository anymore.

Not a cascade problem - it would need orphanRemoval, but that is not available for the association type used...
