

TYPO3.Flow - Bug #36997

Use ActionRequest to validate authentication tokens

2012-05-09 13:55 - Bastian Waidelich

PHP Version:			
Has patch:	No		

Description

Currently the security context passes the **HTTP Request** to `TokenInterface::updateCredentials()` in `updateTokens()`.

This has the disadvantage that authentication tokens can only access raw GET / POST parameters from the HTTP request. Arguments that are only available through routing are not accessible.

Take for example a token based authentication mechanism:

Routes.yaml:

```
-
  uriPattern: 'approveToken/{__authentication.Some.Package.Authentication.AuthenticationKey.code}'
  defaults:
    '@package': 'Some.Package'
    '@controller': 'Some'
    '@action': 'approveToken'
```

in the authentication token there is no way to access the "`__authentication.Some.Package.Authentication.AuthenticationKey.code`" argument.

[BUGFIX] Use ActionRequest to validate authentication tokens

Currently the security context passes the HTTP Request to `TokenInterface::updateCredentials()` in `updateTokens()`. This has the disadvantage that authentication tokens can only access raw GET / POST parameters from the HTTP request. Arguments that are only available through routing are not accessible.

This change adjusts Security/Context, TokenInterface and the provided implementations accordingly.
