

## TYPO3.Flow - Bug #3726

### Links with arguments don't work without routes

2009-06-22 22:38 - Irene Höppner

<b>Status:</b>	Resolved	<b>Start date:</b>	2009-06-22
<b>Priority:</b>	Must have	<b>Due date:</b>	
<b>Assignee:</b>	Karsten Dambekalns	<b>% Done:</b>	100%
<b>Category:</b>	MVC	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	1.0 alpha 2	<b>Complexity:</b>	
<b>PHP Version:</b>			
<b>Has patch:</b>			
<b>Description</b>			
If you set an action link with fluid that uses arguments, it generates a URL like this: <a href="http://blog.flow3.local:81/blog/post/index?blog=c31c5c59-d440-49df-a369-6a48ce29d84f">http://blog.flow3.local:81/blog/post/index?blog=c31c5c59-d440-49df-a369-6a48ce29d84f</a> (as long as no routes are defined)			
This results in an error: An error occurred while trying to call F3\Blog\Controller\PostController->indexAction(). Error: Validation errors for argument "blog"			
If you add [__identity] to the get-var, everything is fine: <a href="http://blog.flow3.local:81/blog/post/index?blog[__identity]=c31c5c59-d440-49df-a369-6a48ce29d84f">http://blog.flow3.local:81/blog/post/index?blog[__identity]=c31c5c59-d440-49df-a369-6a48ce29d84f</a>			
What i found out till now is, that in the validation-objects \F3\FLOW3\MVC\Controller\Argument::getValue() returns the uuid, but not an object....			

#### Associated revisions

##### Revision 45408ced - 2009-06-24 17:12 - Karsten Dambekalns

[FIX] FLOW3 (MVC): Moved mapping of UUIDs to objects into ArgumentsValidator, fixes #3726  
[TASK] FLOW3 (MVC): Removed Argument\setNewFilterChain() and related tests, as Filter\Chain does no longer exist  
[TASK] FLOW3: Some cleanup to documentation, added type hint, removed use statement

##### Revision 2644 - 2009-06-24 17:12 - Karsten Dambekalns

[FIX] FLOW3 (MVC): Moved mapping of UUIDs to objects into ArgumentsValidator, fixes #3726  
[TASK] FLOW3 (MVC): Removed Argument\setNewFilterChain() and related tests, as Filter\Chain does no longer exist  
[TASK] FLOW3: Some cleanup to documentation, added type hint, removed use statement

##### Revision f4754854 - 2009-06-24 23:21 - Karsten Dambekalns

[TAKS] FLOW3 (MVC): Moved mapping of UUIDs to objects from ArgumentsValidator to Argument, refs #3726

##### Revision 2650 - 2009-06-24 23:21 - Karsten Dambekalns

[TAKS] FLOW3 (MVC): Moved mapping of UUIDs to objects from ArgumentsValidator to Argument, refs #3726

#### History

##### #1 - 2009-06-23 21:53 - Irene Höppner

revision r2620 works, revision r2621 doesn't.

##### #2 - 2009-06-24 10:46 - Karsten Dambekalns

- Category set to MVC  
- Target version set to 1.0 alpha 2

##### #3 - 2009-06-24 12:58 - Karsten Dambekalns

The change in [isPropertyValid\(\)](#) causes this, although "cause" may be the wrong word...

##### #4 - 2009-06-24 13:22 - Karsten Dambekalns

- Status changed from New to Accepted

- Assignee set to Karsten Dambekalns

**#5 - 2009-06-24 13:29 - Karsten Dambekalns**

The property mapper adds the returned errors to its local MappingResults instance only if they are Validation\PropertyError instances. Before the change in r2621 there were the same errors for a "blog being a string", but they were coming along as two Validation\Error instances instead. Thus they were not added and MappingResults would return FALSE for hasErrors().

The current behaviour is thus more correct - the order of things needs to be moved around, it seems - so that validation is done after mapIdentityUUIDsToRealObjects() in MVC\Controller\AbstractController.

**#6 - 2009-06-24 18:00 - Karsten Dambekalns**

- Status changed from Accepted to Resolved

- % Done changed from 0 to 100

Applied in changeset r2644.
