[BUGFIX] Inform about possible cause for "No class schema found"

When mapping meta data for Doctrine an error about "No class schema
found for …" could occur. It would not tell in what model the mapping
was taking place, leaving the user to guesswork. This adds output
of the currently examined class to the exception.

Michel, I don't know if this will help in your case, but I had the same error message and the mistake, in my case, was a inverted usage of OneToMany/ManyToOne annotation.
