Description

Currently all functional tests share the same instance of `\TYPO3\FLOW3\Mvc\Routing\Router` because the `InternalRequestEngine` is of scope **singleton**.

This leads to unexpected results and failing tests if tests add custom routes.

The router instance should be reset for each test case.

[BUGFIX] Reset the router for each functional test

Currently all functional tests share the same instance of `\TYPO3\FLOW3\Mvc\Routing\Router` because the `InternalRequestEngine` is of scope `singleton`.

This leads to unexpected results and failing tests if tests add custom routes.

This change fixes this by reinitializing the request engine for each test case that has `testableHttpEnabled` set to `TRUE`.

[BUGFIX] Reset `InternalRequestEngine` for each functional test

Currently all functional tests share the same instance of `\TYPO3\FLOW3\Mvc\Routing\Router` because the `InternalRequestEngine` is of scope `singleton`.

This leads to unexpected results and failing tests if tests add custom routes.

This change fixes this by making the `ObjectManager` forget the singleton instance of the request engine after each `testrun`.

This also reverts the changes that were introduced with

I5a5bf17d00c5be05748a18122dae42989f429221 as they did not have the expected effect.

The solution provided with <http://review.typo3.org/12402> did not solve the issue. We need to reset the InternalRequestEngine as the router can't be reset for some reason.
