

TYPO3.Fluid - Bug #38871

Generating links within script tags gives invalid documents

2012-07-11 13:40 - Jost Baron

Status: Closed	Start date: 2012-07-11
Priority: Should have	Due date:

Target version:	
Has patch: No	

Description

When generating a link in a fluid template, which is enclosed by script-Tags to a given format, the ampersands are not escaped.

So

```
<script type="text/javascript">
var link = '{f:uri.action(action: 'someAction')}';
</script>
```

generates a link like this:

```
index.php?id=123&tx_ext_pi1[controller]=SomeController&tx_ext_pi1[action]=someAction&cHash=foobar
```

This is invalid XHTML (even inside a script, according to the W3C-Validator), as the ampersands are literals. The same thing works fine outside of script tags.

Jost,

I just tried in in Flow context and it doesn't encode the ampersands since it's not necessary in plain HTML (non-xhtml). If you need to encode the ampersand anyways, add the `format.htmlentities` ViewHelper just like this:

```
{f:uri.action(action: 'someAction') -> f:format.htmlentities() }
```

Don't hesitate to reopen if you don't agree or if extbase is still affected with it.
