Description

I'm getting "Uncaught TYPO3 Exception" when accessing Filelist module on Windows.
Seems that module breaks when there are files directly in fileadmin folder, files in other folders are displaying just fine.
I attached stack trace.

[BUGFIX] Uncaught Exception when accessing "Filelist" module in Windows

An Exception is thrown when files are found directly in fileadmin folder.
Because of a backslash a false identifier is generated and file cannot be found anymore.

same here. This happens only under fileadmin folder. All other subfolders are working well.

#2 - 2012-09-02 13:23 - Andreas Wolf

- Status changed from New to Needs Feedback

Are you using the auto-generated fileadmin mount? Maybe there's a problem with the way this one is created.

Apart from that, I spotted another error that should not be related to this bug - but you never know... See [#40520](#) for more information.

Yes.

#6 - 2012-09-11 12:32 - Nicole Cordes

Have the same issue. Debugging shows that identifier was created the wrong way. Backslashes are used on windows systems which have to be replaced. Upload a patch for that.
