

TYPO3.Flow - Bug #39674

\TYPO3\FLOW3\var_dump behaves weird in controller actions doing return

2012-08-10 10:02 - Adrian Förder

Has patch: No	

Description

doing this:

```
public function indexAction() {
    \TYPO3\FLOW3\var_dump('vardump.');
```

```
    return 'I am a return.';
}
```

results in a frontend (browser, response) output like this:

```
<link rel="sty
```

funnily, the amount of characters being actually outputted correlates with the output length of the return; so

```
return 'f' . str_repeat('o', 30);
```

results in

```
<link rel="stylesheet" type="te
(1234567890123456789012345678901) => 31 chars
```
