

TYPO3.Kickstart - Feature #39790

Allow forward slashes where backslashes need to be specified

2012-08-14 09:28 - Robert Lemke

Target version:			
Description			
<p>Typing backslashes on the command line is cumbersome because each of them needs to be escaped with an additional backslash. Therefore it would be convenient if the kickstarter would allow forward slashes as well and convert them to backslashes internally.</p> <p>This should be implemented especially for the kickstart:model command (property types are often class names) but may apply to other commands as well.</p>
