

## TYPO3 Core - Bug #40161

Task # 40095 (Closed): Move core to namespaces

### Add Tx\_Scheduler\_AdditionalFieldProvider to mapping

2012-08-25 09:10 - Christian Kuhn

#### History

##### #1 - 2012-08-25 09:11 - Christian Kuhn

Using the old interface must still work!

##### #2 - 2012-08-25 11:37 - Steffen Gebert

- Status changed from New to Accepted

##### #3 - 2012-08-26 11:44 - Christian Kuhn

it **is** in the mapping, but there seems still to be a problem, it seems to work on non case sensitive filesystems, but doesn't on case sensitive systems. example extension to reproduce is enetcache: just install and then try to add a task.

Fatal error: Declaration of tx\_enetcache\_task\_DropTags\_AdditionalFieldProvider::getAdditionalFields() must be compatible with that of TYPO3\CMS\Scheduler\AdditionalFieldProviderInterface::getAdditionalFields() in ....

##### #4 - 2012-08-31 23:57 - Nicole Cordes

I got this one as well and Thomas and I discovered it is related to an outdated PHP version (< 5.3.8).

We have to develop some workaround for lower versions which we have to support as well (current official Debian version is 5.3.3)

##### #5 - 2012-10-19 17:30 - Christian Kuhn

- Status changed from Accepted to Rejected

- % Done changed from 0 to 100

Not valid anymore, solved with a compat layer for low 5.3 php versions.
