

TYPO3 Core - Bug #40498

embedded jquery

2012-09-01 00:05 - Christian Welzel

Description

The new extension manager embeds a copy of jquery 1.7.1 in typo3/sysex/extensionmanager/Resources/Public/JavaScript/jquery.js which is also bundled with a plugin "jquery.dataTables.min.js".
jquery 1.8 is added to the core in typo3/contrib/jquery.
The new EM must use this copy instead of its own and also move the embedded plugin to a proper location under typo3/contrib.

History

#1 - 2012-09-01 00:11 - Christian Welzel

There are many other embedded code copies in typo3/sysex/extensionmanager/Resources/Public/Contrib/ and typo3/sysex/extensionmanager/Resources/Public/JavaScript/.
Please move them to a proper location under typo3/contrib/ too.

#2 - 2012-10-02 23:48 - Kai Vogel

Note: The DataTables plugin will be available in version 1.9.4 in the contrib directory of jquery if this patch will be merged into trunk:-

This would mean, that we officially support this from now on and encourage extension developers to use these. This is not true.
We agreed on an exception for the extension manager, but besides that, we most likely will remove jQuery from typo3/contrib again.

#4 - 2012-10-05 14:15 - Christian Welzel

Then please move the datatable plugin out of the jquery.js so i can properly package TYPO3 for debian.
debian requires me to replace the embedded copy of jquery which is not possible when jquery and the plugin are merged.
