

TYPO3.Flow - Bug #40626

Cookie - Setting throws exception in Http\Response

2012-09-04 22:26 - Ferdinand Kuhl

Status:	Resolved	Start date:	2012-09-04
Priority:	Should have	Due date:	
Assignee:	Robert Lemke	% Done:	100%
Category:	Http	Estimated time:	0.00 hour
Target version:	2.0 beta 1	Complexity:	medium
PHP Version:	5.4		
Has patch:	No		
Description			
The "Set-Cookie" headers must be set via setCookie(). 28 TYPO3\FLOW3\Http\Headers::set("Set-Cookie", "JSESSIONID=0000bpxjzMKKBYiEQM5yG5xd5CG:15rk67n7r; Path=/", boolean)			
If the foreign webserver sends an header "Set-Cookie" FLOW3 throws an Exception, and breaks header - parsing. So no content from Servers sending cookies can be extracted.

#1 - 2012-09-05 11:26 - Robert Lemke

- Status changed from New to Needs Feedback
- Priority changed from -- undefined -- to Should have
- Target version set to 1.1.1
- PHP Version set to 5.4
- Complexity set to medium

Thanks for the report. Can you give some more info about the steps to reproduce this bug? Were you using the Http\Client\Browser API?

#2 - 2012-09-05 11:33 - Ferdinand Kuhl

Exactly. Together with curlEngine. (Where another bug is, that no host-header is sent - which violates HTTP/1.1 - Protocol, but I will open a new Issue with patch shortly for that)

But reproduction is possible if you use the Example from Http foundation together with this url:
\$response = \$this->browser->request('http://typo3.org/https-ajax/info/user.xml');

The Host header is sent as well, btw...
