#### Description

Hi.

Today we've found an issue in createNewRecord method of t3lib\_TCEforms\_inline class.

Line 1106 contains such a condition:

```
if ($config['localizationMode'] == 'select')
```

But TCA specification ([http://typo3.org/documentation/document-library/core-documentation/doc\\_core\\_tca/4.7.1/view/1/3/#id590095](http://typo3.org/documentation/document-library/core-documentation/doc_core_tca/4.7.1/view/1/3/#id590095))

says, that localizationMode is part of 'behaviour' config setting, so, when someone tries to create a new 'inline' record inside of localized parent record, 'inline' record get always created with sys\_language\_uid=0, because condition above will never be TRUE.

Current hack is to make specification in such a way:

```
'field_name' => array (
    'label' => 'field',
    'config' => array (
        'type' => 'inline',
        'foreign_table' => 'tx_inline_records',
        'foreign_field' => 'parent_id',
        'behaviour' => array(
            'localizationMode' => 'select'
        ),
        'localizationMode' => 'select',
    )
),
```

**localizationMode** must be set two times: on root of 'config' and inside of 'behaviour'.

Fix:

Line 1106:

```
if ($config['behaviour']['localizationMode'] == 'select')
```

TYPO3 4.7.4
