TYPO3.Flow - Feature #4084

Make the application context accessible by a read-only setting

2009-07-31 13:28 - Robert Lemke

Status:	Resolved		**Start date:**	2009-07-31
Priority:	Should have		**Due date:**

Target version:	1.0 alpha 3			
PHP Version:			**Complexity:**	
Has patch:				

Description

In certain areas of FLOW3 it would come handy if the current application context could be retrieved from FLOW3's settings. Therefore the configuration manager could set "FLOW3.core.context" automatically to the current application context.

Associated revisions

Revision c6e87fa4 - 2009-07-31 13:43 - Robert Lemke

[+FEATURE] FLOW3 (Cache): The FileBackend now uses a shorter hash for the directory names which relaxes the situation for Windows users with a limited path length. The hash is now rendered from the Web path, SAPI type, process user name and application context. Please manually delete everything the Data/Temporary/ directory to get rid of old caches files.
[+FEATURE] FLOW3 (Configuration): The configuration manager now sets the FLOW3 setting "core.context" to the current application context. Resolves #4084
[+BUGFIX] FLOW3 (Core): Reimplemented the detection of various paths which are later available as FLOW3_PATH_ constants. Now supports any setup with symlinks which makes sense. It's important though that the flow3 script is a real file in the installation and no symlink. FLOW3's root path is now determined by an environment variable. This is optional in web mode but mandatory in CLI mode. The environment variable is set automatically by the flow3 script. Resolves #4082 and relates to #3990.
[+BUGFIX] FLOW3 (Package): Files in the directory Packages/ are now ignored by the package manager and the package directory scan was optimized for better performance. Resolves #4085
[~TASK] FLOW3 (Utility): The Arrays::trimExplode() function now removes empty values from the result by default.
