Description

In short: csrfToken is not added to links who's target action is "someOtherAction" but only works for action names like "someAction"

After digging a little bit in code I found that UriBuilder->uriFor() makes the @action argument forcefully lowercase and hence \$this->reflectionService->hasMethod(\$className, \$actionName) in the CsrfProtectionAspect returns false.

Sorry, I didn't see this report (it would have saved me a lot of time).

I'm closing this as duplicate of [#42083](#) now, the issue should be solved with <http://review.typo3.org/15765>

Please reopen if that's not the case!
