

TYPO3.Flow - Bug #42083

CSRF token is not appended for actions with mixed case characters

2012-10-17 16:52 - Bastian Waidelich

Target version:	2.0 beta 1	Complexity:	
PHP Version:			
Has patch:	No		
Description			
Since the update (I don't know what exactly broke this), the CrsfProtectionAspect no longer appends the CSRF token when the target action contains uppercase characters (e.g. someSpecialAction).			
The reason is, that in the aspect the action method name is retrieved all lowercase thus ReflectionService::hasMethod(\$className, \$actionMethodName) returns FALSE if \$actionMethodName is not correctly cased.

[BUGFIX] CSRF token is not appended for actions with mixed case characters

The CrsfProtectionAspect no longer appends the CSRF token when the target action contains uppercase characters (e.g. someSpecialAction).

This change fixes this by resolving the correctly cased method name before checking for the SkipCsrftoken annotation in the aspect.
