Has patch: No	
Description Since the implementation of custom error renderers (#39423) 404 errors don't show any technical details to the user, even in development context. This should be changed, so we can include details about the resolved package key, controller name etc if no matching controller could be found.

[FEATURE] Include technical details to exceptions in dev context

Since the implementation of custom error renderers ([#39423](#)) 404 errors don't show any technical details to the user, even in development context.

This change passes the exception to the fluid template which can render it, if configured. Furthermore this adds default rendering options and configures all exceptionHandlers to include technical details in development context.
