Description	
pageTSconfig mod.web_layout.menu.function.3=0 does not work in TYPO3 4.7 (disable page information in pagemodule)	
does work in 4.5	

History

#1 - 2012-10-30 08:19 - Felix Kopp

Hi Edward,

could you please try to use the function "disablePageInformation"?

Here you can find the documentation

http://typo3.org/documentation/document-library/core-documentation/doc_core_tsconfig/4.7.0/view/1/4/#id552919

You can put the line

```
mod.web_layout.disablePageInformation = 1
```

into the field "Page TSConfig" on a page to remove the Page Information for this and all sub pages.
The Page Information function will be removed in TYPO3 6.0 completely.

Hi Felix,

thanks for feedback. You are right. It works.

Edward

#3 - 2012-11-01 10:39 - Thorsten Kahler

- Project changed from TYPO3 Core to 1111

- Category deleted (Backend User Interface)

Moved to project Documentation > Official Documentation > TSconfig.

Don't know if it's worth the effort to add the info to the documentation of a single version (4.7).

#4 - 2012-11-01 12:38 - Chris topher

- Subject changed from pageTSconfig mod.web_layout.menu.function.3=0 does not work 4.7 to pageTSconfig: mod.web_layout.menu.function.3=0 does not work

I don't think that we should start *documenting bugs* instead of *fixing* them.

Apart from that something like "Is still there and is supposed to work, but got broken." in the docs would be kind of a silent "removal through the backdoor", which would circumvent our deprecation policy that TypoScript options, which should be removed, must be deprecated first. If we wanted to remove this option, we would have to deprecate it, wait for two major versions and *then* it could finally be removed. However, neither deprecation nor removal have been done, so there is nothing to document.

I can't see that the function mod.web_layout.menu.function.x=y (which has neither been removed, nor deprecated) would not make sense anymore.

Hiding unneeded items in the interface always is a good thing to prevent clutter. Such options have proven to be helpful for editors - deprecating useful options (to finally be able to *remove* them) is the wrong way.

Instead this bug should be fixed.
