

TYPO3 Core - Bug #42500

Sysex form output not adjustable via ts in 4.7.5

2012-10-29 21:01 - Bernhard Eckl

Description

In T3 4.7.4 I used the following typoscript to adjust the output of the form sysex:

```
### Mailform ###
tt_content.mailform.10.20 =
tt_content.mailform.20.params.form = class="ym-form"
#tt_content.mailform.20.stdWrap.dataWrap = <div class="ym-form">|</div>
tt_content.mailform.20.stdWrap.wrap = <fieldset class="ym-form"> | </fieldset>
tt_content.mailform.20.params.input = class="ym-fbox-text"
#tt_content.mailform.20.params.password = class="mf-pass"
tt_content.mailform.20.params.textarea = class="ym-fbox-text"
#tt_content.mailform.20.params.check = class="mf-check"
#tt_content.mailform.20.params.radio = class="mf-radio"
tt_content.mailform.20.params.select = class="ym-fbox-select"
tt_content.mailform.20.params.file = class="mf-file"
tt_content.mailform.20.params.reset = class="ym-button"
tt_content.mailform.20.params.submit = class="ym-button"

#tt_content.mailform.20.layout = <div class="ym-fbox-text">###LABEL### ##FIELD###</div>
#tt_content.mailform.20.COMMENT.layout = <div class="csc-mailform-label1">###LABEL###</div>
tt_content.mailform.20.RADIO.layout = <div class="ym-fbox-check">###LABEL### <span class="csc-mailform-radio">###FIELD###</span></div>
#tt_content.mailform.20.LABEL.layout = <div class="csc-mailform-field2">###LABEL### <span class="csc-mailform-label">###FIELD###</span></div>
### Mailform End ###
```

But since 4.7.5, this does not work anymore. I also could not find any documentation about this.

can you specify what exactly doesn't work anymore and how this can be reproduced?

#2 - 2012-10-30 08:39 - Bernhard Eckl

The whole typoscript above does not have any affect in 4.7.5 (maybe a few lines still work, I'm not 100% sure). E.g. this doesn't have any affect in the frontend: tt_content.mailform.20.params.submit = class="ym-button"

#3 - 2012-11-13 20:53 - Fabien Udriot

Checkout manual in SYSEXT form/Documentation/Manual/en/manual.sw. Wouldn't it be more this kind of configuration of the FORM object to tamper?

[...]

Update: I am also facing the problem that the mailform configuration is not applied (running a 4.7.5 TYPO3 too). I haven't dug more than that.

#4 - 2013-01-09 17:42 - Tomas Havner

Try:

```
tt_content.mailform.20 {
stdWrap.wrap >
layout {
form (
<form class="form-horizontal">
<containerWrap />
</form>
)
containerWrap (
<section>
<elements />
</section>
)
elementWrap (
<div>
<element />
</div>
)
mandatory (
<sup class="ym-required">
<mandatoryvalue />
</sup>
)
error (
<strong class="ym-message">
<errorvalue />
</strong>
)
textline (
<div class="control-group">
<label class="control-label"><label /></label>
<div class="controls"><input /></div>
</div>
)
textarea (
<div class="ym-fbox-text">
<label />
<textarea />
</div>
)
select (
<div class="ym-fbox-select">
<label />
<select>
<elements />
</select>
</div>
)
checkbox (
<div class="ym-fbox-check">
<input />
<label />
</div>
)
radio (
<div class="ym-fbox-check">
<input />
<label />
</div>
)
button (
<div class="ym-fbox-button">
<input />
</div>
)
reset (
<div class="ym-fbox-button">
<input />
</div>
)
```

```
)
submit (
<div class="ym-fbox-button">
<input />
</div>
)
}
}
```

/Tomas

Does not work. Any other ideas, is there somebody who knows how it works actually?

In my case I want to add the classes needed to apply css for the yaml css framework (without changing all the css).

I think this should also get integrated into the manual to know how to adjust the output (if it is already known).

Here is also described how it worked in the past: <http://forge.typo3.org/issues/42500>

#6 - 2013-05-13 20:55 - Bernhard Eckl

- File *form-confirmation.png* added

I just tested the typoscript of Tomas Havner again in the new T3 6.1 and it works now (I also found the part in the manual now).

BUT: If confirmation is activated, the confirmation page is broken, the text in the form is not displayed and it is not possible to send the form.

Here is the html output of the confirmation page and enclosed also a screenshot (confirmation page should not use the typoscript for the layout):

```
<section>
  <div class="csc-form-2 csc-form-element csc-form-element-textline">
    <div class="ym-fbox-text">
      <label>Vorname</label>
      <div class="controls">
        <input />
      </div>
    </div>
  </div>
  <div class="csc-form-3 csc-form-element csc-form-element-textline">
    <div class="ym-fbox-text">
      <label>Nachname</label>
      <div class="controls">
        <input />
      </div>
    </div>
  </div>
  <div class="csc-form-4 csc-form-element csc-form-element-textline">
    <div class="ym-fbox-text">
      <label>Firma</label>
      <div class="controls">
        <input />
      </div>
    </div>
  </div>
  <div class="csc-form-5 csc-form-element csc-form-element-textline">
    <div class="ym-fbox-text">
      <label>E-Mail</label>
      <div class="controls">
        <input />
      </div>
    </div>
  </div>
  <div class="csc-form-6 csc-form-element csc-form-element-textline">
    <div class="ym-fbox-text">
      <label>Betreff</label>
      <div class="controls">
        <input />
      </div>
    </div>
  </div>
  <div class="csc-form-7 csc-form-element csc-form-element-textarea">
    <div class="ym-fbox-text">
      <label>Nachricht</label>
      <textarea />
    </div>
  </div>
</section>
```

```
</div>
</div>
</section>
```

```
<form class="csc-form-confirmation" method="post" action="kontakt/">
  <fieldset>
    <ol>
      <li class="csc-form-confirmation-false">
        <input type="submit" value="Zurück zum Formular" name="tx_form[confirmation-false]
" />
      </li>
      <li class="csc-form-confirmation-true">
        <input type="submit" value="Bestätigen" name="tx_form[confirmation-true]" />
      </li>
    </ol>
  </fieldset>
</form>
```

- Status changed from Needs Feedback to New

- Is Regression set to No

#8 - 2014-04-14 19:23 - Bernhard Eckl

Again I had the same problem and solved it by hardcoding into the ext (quick and dirty). The thing is, that for confirmation and mail there should be other typoscript arrays.

Changes (T3 4.7, brackets are replaced by this board...):

Classes/View/Confirmation: line 137

```
return '<form class="csc-form-confirmation ym-form" method="post" action="' . $action . '">'. $this->localObj->cObjGetSingle($type, $value);
(The form tag should be at the beginning, otherwise some classes of CSS frameworks are not working)
```

Classes/View/Mail/Html/Element/Abstract.php: line 221-223

```
$layout = str_replace('<input />', '</td><td><inputvalue />', $layout);
$layout = str_replace('<textarea />', '</td><td><inputvalue />', $layout);
$layout = str_replace('<div class="ym-fbox-text clearfix">', '<td class="labeltd" style="width: 200px;" >', $layout);
$layout = str_replace('</div>', '</td>', $layout);
```

And in case elementWrap:

```
$layout = str_replace('<div>', '<tr>', $layout);
$layout = str_replace('</div>', '</tr>', $layout);
```

And in containerWrap:

```
$layout = str_replace('<section>', '<tr>', $layout);
$layout = str_replace('</section>', '</tr>', $layout);
```

Classes/View/Confirmation/Element/Abstract.php: lines 225-226

```
$layout = str_replace('<input />', '<inputvalue />', $layout);
$layout = str_replace('<textarea />', '<inputvalue />', $layout);
```

This works with the following typoscript:

```
tt_content.mailform.20 {
#stdWrap.wrap >
layout {
form (
<form class="ym-form ym-columnar">
<containerWrap />
</form>
)
containerWrap (
<section>
<elements />
</section>
)
```

```

elementWrap (
<div>
<element />
</div>
)
mandatory (
<sup class="ym-required">
<mandatoryvalue />
</sup>
)
error (
<strong class="ym-message">
<errorvalue />
</strong>
)
textline (
<div class="ym-fbox-text clearfix">
<label />
<input />
</div>
)
textarea (
<div class="ym-fbox-text clearfix">
<label />
<textarea />
</div>
)
select (
<div class="ym-fbox-select">
<label />
<select>
<elements />
</select>
</div>
)
checkbox (
<div class="ym-fbox-check">
<input />
<label />
</div>
)
radio (
<div class="ym-fbox-check">
<label />
<input />
</div>
)
button (
<div class="ym-fbox-button">
<label />
<input />
</div>
)
reset (
<div class="ym-fbox-button">
<label />
<input />
</div>
)
submit (
<div class="ym-fbox-button">
<label />
<input />
</div>
)
}
}

```

So please add additional Typoscript layout options for confirmation and for mail (input can not be used for confirmation and mail, there it should be inputvalue, this is the main problem).

#9 - 2014-07-08 19:29 - Bernhard Eckl

I just had a new project starting with TYPO3 6.2, I also switched to Bootstrap, and I also used extension bootstrap_package. So with this system there is still the same problem (problem can be easily reproduced, the current Demo is based on that version and bootstrap_package, you just have to

change the form to get a mail (then you can see that the mail content is buggy) and activate confirmation page (then you can see the broken confirmation page). This is because bootstrap_package has some typoscript for styling the form, but the same problem occurs as I mentioned. Please can someone fix that?! I don't want to be a lonely talker...

#10 - 2014-12-17 20:48 - Frans Saris

I think this one can be closed now [#31951](#) is relolved.

#11 - 2014-12-17 20:52 - Frans Saris

- *Status changed from New to Needs Feedback*

#12 - 2015-05-04 12:37 - Riccardo De Contardi
