Description

When a path like resource://TYPO3.Neos/Public/JavaScript/ is handed to getLocalizedFilename(), it tries to check for the existence of resource://TYPO3.en.Neos/Public/JavaScript/ - which breaks, unless you happen to have a package TYPO3.en.Neos activated.

[BUGFIX] Fix handling of paths with dots in getLocalizedFilename()

When a path like resource://TYPO3.Neos/Public/JavaScript/ is handed to getLocalizedFilename(), it tries to check for the existence of resource://TYPO3.en.Neos/Public/JavaScript/ - which breaks, unless you happen to have a package TYPO3.en.Neos activated.

This change fixes this by using the basename in the check for an extension.
