Description			
<p>https://review.typo3.org/#/c/16659/1 introduced a regression when phpunit is installed using PEAR. This is because the autoload.php is found in composer managed installations, but this does not ensure that phpunit is actually installed using composer too.</p>

[BUGFIX] Check for installation of phpunit by composer

1b4b6c68c03590444addb7c2e5af89b2a2d90051f introduced a regression for running functional tests when composer is used in the project, but PHPUnit is still installed using PEAR.

This change adds an additional check to verify if phpunit is actually installed in the Libraries folder. By doing so the Bootstrap will fall back to the PEAR installation of phpunit.
