Revision f0776fb3 - 2013-04-10 17:25 - Karsten Dambekalns

[!!!][FEATURE] Handle roles consistently as objects

With this change roles are consistently used as objects.

To prevent naming conflicts between roles from different packages the package key is added to the role names.

The handling of roles now is more strict and does not allow the use of not configured (non-existent) roles anymore.

Roles are now referenced as real instances instead of their string identifiers in models. Roles which were defined in policies are now automatically mirrored to the RoleRepository (usually stored as a table in a database).

The getRoles() method has been removed from TokenInterface.
