

TYPO3.Flow - Bug #43621

Composer installer overwrites Settings.yaml.example

2012-12-05 12:07 - Christopher Hlubek

Description

The Flow composer installer seems to overwrite an existing file in Configuration/Settings.yaml.example which should not happen for custom distributions.

Well, when I added those files, I figured the example file should be updated with Flow - otherwise one would easily be trapped with an outdated example file. We could move it to be a "default" instead of "essential", then it would not be overwritten. But also not be overwritten in case you would want it to be overwritten because it is not part of a custom distribution...

#2 - 2012-12-06 18:25 - Christopher Hlubek

I would be in favor of using the "default" approach which sounds reasonable for me. As a user I would not expect the example file to be updated on subsequent calls to "composer update".
