Description			
When expanding/collapsing a section in the admin panel it (unnecessarily?) reloads the page. (Tested on 6.0, but I guess that's standard-behaviour since long.)

- Status changed from New to Accepted
- Target version set to 7.2 (Frontend)
- Is Regression set to No

I'm pretty sure this is due to the fact that the AP needs to set parameters on opening/closing

Parameters that get saved you mean? Could we do that via AJAX then?

It sets get parameters. Changing that, will mean re-writing the admin panel (internals) as a whole.

The rewrite of admin panel did not make it into cms7, so I move it to v8.

I took a look with 7.6.23, 8.7.10 and 9.2.0-dev (latest master)

- **on all versions** expanding/collapsing a single section of admin panel triggers the reloading of the page
- **only on version 7.6.23** expanding/collapsing the whole admin panel triggers the reloading of the page

Updated situation after Admin Panel rework:

- 1) Enabling/Disabling the admin panel (red/green switch icon): forces reload of page
- 2) Expanding/Collapsing the TypoScript Section: does not force reload of the page
 - 2.1) Expanding/Collapsing the "setigns group": does not force reload of the page
 - 2.2) Clicking on "Save" button forces reload of the page
- 3) Expanding/Collapsing the Info Section (and all tabs): does not force reload of the page
- 4) Expanding/Collapsing the Settings Section: does not force reload of the page
 - 4.1) Clicking on "Update settings" button forces reload of the page
 - 4.2) Clicking on "Clear cache of current page" button forces reload of the page
 - 4.3) Clicking on "Clear Frontend cache" button forces reload of the page
 - 4.4) All icons in "Edit" section force a reload of the page (in fact, they open a different page inside /typo3/), except "Open TYPO3 backend" that opens the backend in another tab

@Riccardo

If I got this right, the adminpanel only reloads when it needs to now (for example because information changed because of changed settings).

I can't yet provide feedback regarding the redesigned Admin-Panel for 9 LTS. But in previous versions even closing an information-div led to a reload, which could of course have happened by just setting a CSS-class to "closed" or something. That was the intention to improve with this issue.

Fixed with the rewrite.
