Description

Hello,

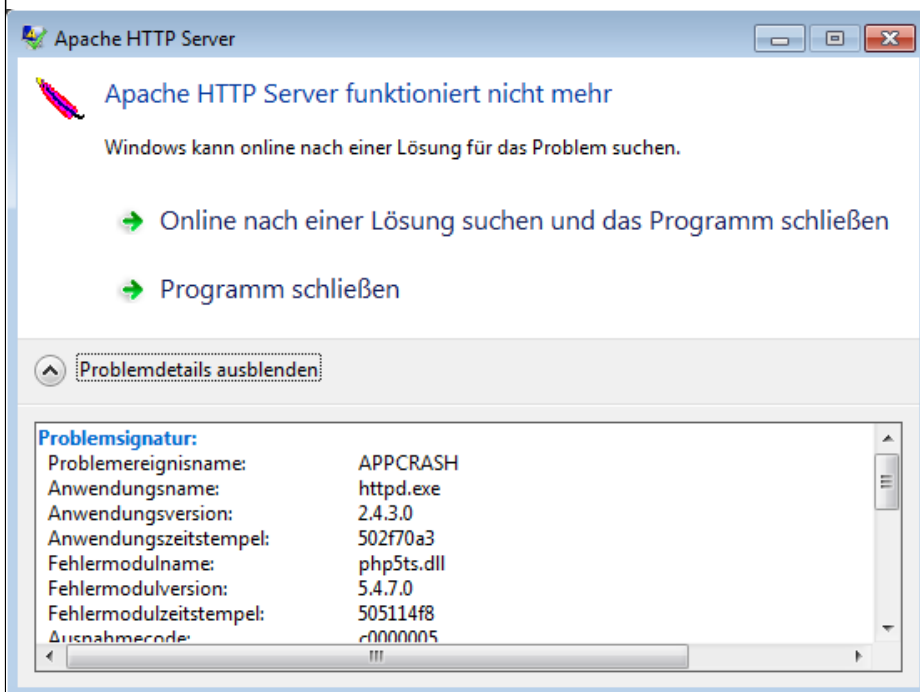

My System:

OS: Windows 7

Bundle: XAMPP v1.8.1

I installed Neos by [this instruction](#).

Everything works fine, but I get this error message all day when surfing in front- or in backend:

Problemsignatur:

Problemereignisname: APPCRASH

Anwendungsname: httpd.exe

Anwendungsversion: 2.4.3.0

Anwendungszeitstempel: 502f70a3

Fehlermodulname: php5ts.dll

Fehlermodulversion: 5.4.7.0

Fehlermodulzeitstempel: 505114f8

Ausnahmecode: c0000005

Ausnahmeoffset: 00035ce8

Betriebssystemversion: 6.1.7601.2.1.0.256.4

Gebietsschema-ID: 1031

Zusatzinformation 1: 0a9e

Zusatzinformation 2: 0a9e372d3b4ad19135b953a78882e789

Zusatzinformation 3: 0a9e

Zusatzinformation 4: 0a9e372d3b4ad19135b953a78882e789

I think this is the corresponding error in the log-File from apache:

```
[Wed Dec 12 13:29:27.655765 2012] [mpm_winnt:notice] [pid 1412:tid 248] AH00428: Parent: child process exited with status 3221225477 -- Restarting.
```

The strange thing is, that nothing crashes like it says, it works fine, I only have to click "Programm schließen / Close program" and the website resumes loading.

XAMPP Control Panel also says, that apache is still running...

I googled a bit and tried all of this solutions:

Set in httpd.conf:

```
TraceEnable off
EnableMMAP off
EnableSendfile Off
```

```
output_buffer to 5000000
```

```
<IfModule mpm_winnt.c>
ThreadsPerChild 50
MaxRequestsPerChild 0
ThreadStackSize 8388608
</IfModule>
```

```
AcceptFilter http none
<IfDefine AEX>
Win32DisableAcceptEx
</IfDefine>
```

...But nothing works.

Can someone help me?

Nothing we can do about that - it's an unstable Apache (for whatever reason). Maybe trying some of the suggestion on <http://stackoverflow.com/questions/1138269/apache-error-notice-parent-child-process-exited-with-status-3221225477-res> helps. Good luck!
